

## InterWrite goes fullscreen for faster and more effective text input

Sunnysoft is the first one to come with an application that allows input of national language characters in fullscreen keyboard mode. It is yet another step in continuous company aim to make mobile devices as easy to use as possible.

**Prague, Czech Republic, April 13th, 2007** – Sunnysoft is launching new version of products from Sunnysoft InterWrite family. The biggest contribution of version 9.5 compared to 9.1 is fullscreen keyboard. Bigger keys enable faster, more effective text input and comfortable user experience.

It significantly eliminates typing errors often made when using default system keyboard (SIP). Possibility to define key shapes and colours or enable/disable sounds make for another reason why choose this functional and trendy looking solution. Other improvements are for example: possibility to assign exactly which gesture (dragging stylus in defined direction) will produce or complement certain national character or extended settings for screenshot function.

Sunnysoft InterWrite product range contains up to date four products. InterWrite Small, Standard, Pro and newly Sunnysoft Fullscreen.

Exact list of all InterWrite varieties is available in [Software](#) section on company website. It includes references, detailed descriptions, screenshots and links to [online shop](#).
